

Ocean Tracking Network

ACZICS #68 Round Table Report

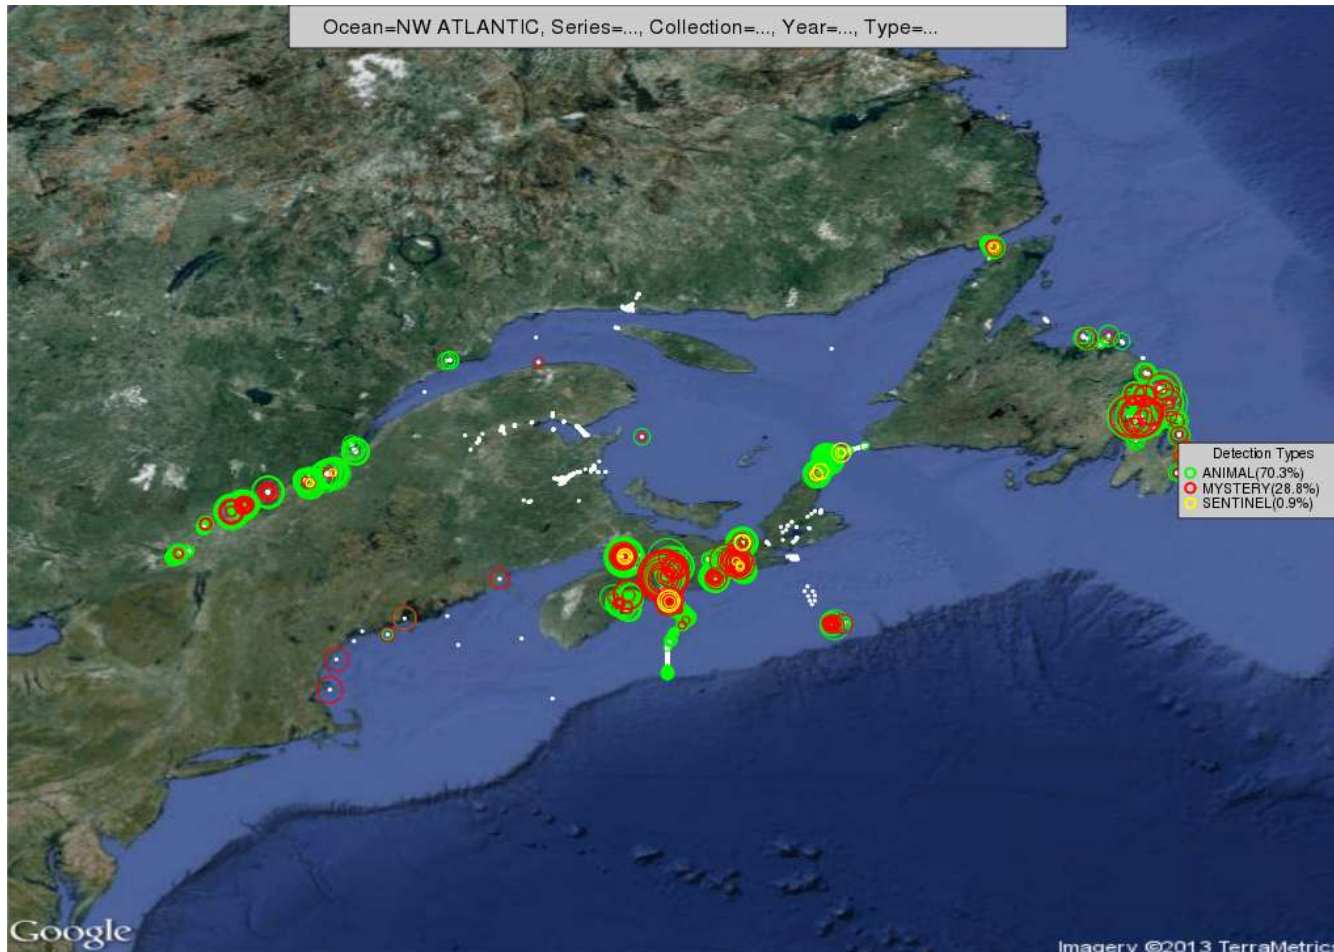

- The Ocean Tracking Network (OTN) data warehouse at Dalhousie University in Halifax Canada now holds 29 million records on 28 thousand tagged animals from 70 plus institutions in 13 countries, including 8 million records recently acquired from the former Pacific Ocean Shelf Tracking (POST).

OTN receiver deployments (small white dots) overlaid with total number of unique tags detected by station (log scaled and colored by type of detection, where ANIMAL is green, MYSTERY is red and SENTINEL is yellow).

OTN-NW Atlantic

OTN - NW Atlantic receiver deployments (small white dots) overlaid with total number of unique tags detected by station (log scaled and colored by type of detection, where ANIMAL is green, MYSTERY is red and SENTINEL is yellow).

Other progress ...

- Oceanographer friendly acoustic telemetry data exchange standard for the North West Association of Networked Ocean Observing and United States Integrated Ocean Observing Systems (NANOOS and IOOS)
- Stand alone NE Pacific and South Africa (SE Atlantic and E Indian oceans) regional OTN nodes
- Long-term ocean tracking data archive at Canada's National Oceanographic Data Centre (NODC)
