

COINAtlantic INTERNET VISIBILITY INITIATIVE

An initiative of the ACZISC to increase the visibility of geo-referenced information on the internet.

The ACZISC Secretariat will provide you with:

- ***An Initial consultation*** to determine which information/data holdings are suitable for use with the COINAtlantic Geocontent Generator (CGG).
- ***Training*** in the use of the CGG.
- Follow up ***Support***.

What is the CGG?

The CGG is a free on-line utility that allows users to generate information about their data, project or organization that is tied automatically to a geospatial polygon of their choice and published on-line in a way that will be found quickly by the Google search engine. It is intended to be a simple-to-use tool that will allow non-specialists to allow others to find and view their information.
